

Creating an HTML table...

An instructor once told us to draw the table we want first, then make sure all the tags have opens and closes - the same number of data cells in every rows - then replace the data cells you want to “colspan” or “rowspan”. It’s just easier to visualize at first this way...

<table>

<th></th>	<th></th>	<th></th>	</tr>
<td></td>	<td></td>	<td></td>	</tr>
<td rowspan="2"></td>	<td></td>	<td></td>	</tr>
<td colspan="2"></td>		</tr>	
<td></td>	<td></td>	<td></td>	</tr>

</table>

<th> default position is: **bold** and align="center" valign="middle" (heading - ADA compliance)

<td> default position is: align="left" valign="middle"

If you want something different you must change these attributes
